

There are several steps:

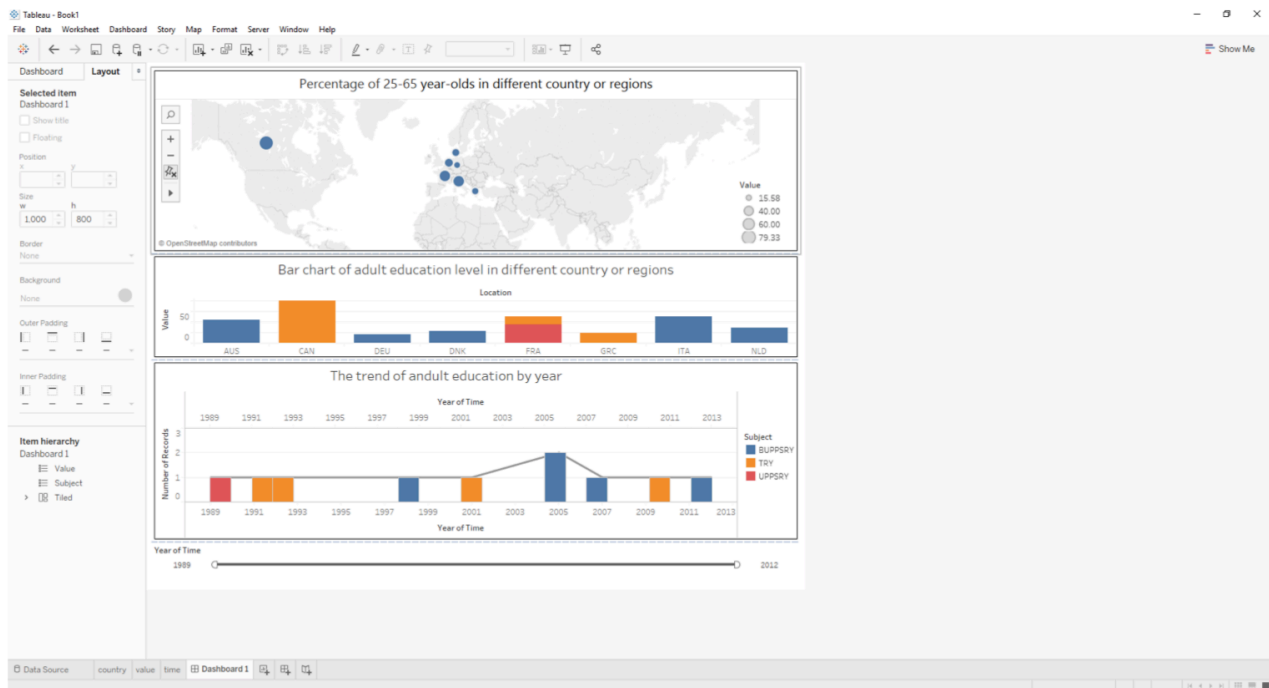

Analysis of raw data

The data we selected is related to adult education level, which looks at the highest level of education completed by the 25-64 year-old population. There are three levels: below upper-secondary(BUPPSRY), upper secondary(UPPSRY) and tertiary education(TRY). The indicator is measured as a percentage of same age population.

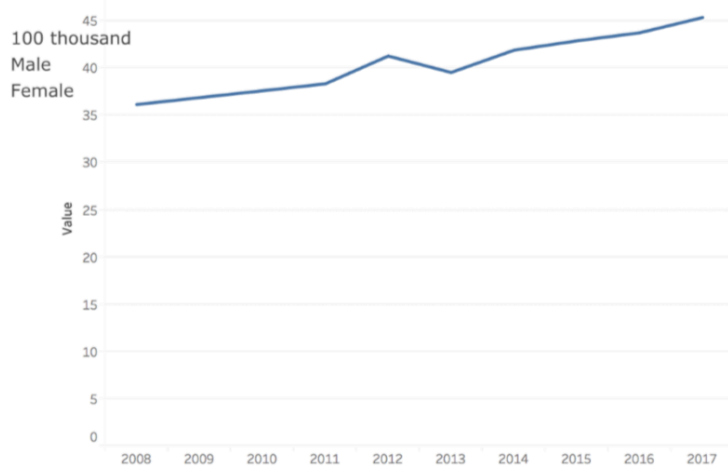

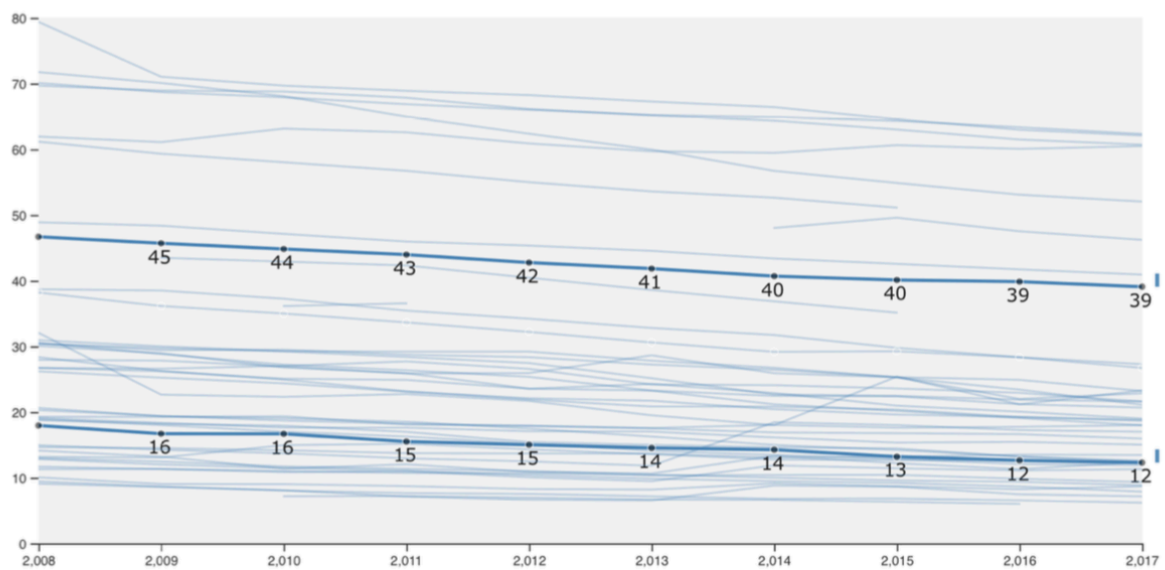

Visualisation

Study and compare the differences in adult education levels in different countries at different times.
